EXPLANATION OF TIME TABLE.

To find the number of days intervening between two dates, take the black figures in same column with the first date and subtract from the amount shown by black figures in same column with second date.

For instance, on what day will a note fall due dated March 4 and payable 90 days (without grace) after date? In same column with March 4 we find the black figures show 63; to which add 90, making 153. Therefore we find the note would be due on June 2, as on that date we find the black figures in same column with June 2 show a like amount, viz., 153. If the note should bear 3 days grace, then it would be due on June 5.

When February of leap year should intervene, add one day.
